

BITDAO NETWORK

The background is a solid dark blue. It is decorated with several light blue lines that follow a step-like or staircase pattern, moving generally from the bottom-left towards the top-right. Small white circles are placed at the end of these lines, resembling data points or nodes in a network.

DeFI + Decentralised Pegged tokens on Multi-chain

IF YOU CAN'T BEAT THEM , JOIN THEM

Every other token aims to compete with Bitcoin , by pointing Bitcoins' low tps and slow transaction speed.

But they fail to understand, the fact that only Bitcoin is the ultimate store of value owing to its trillion dollar valuation.

BITCOIN SCALING PROBLEM

Bitcoin
has serious
scaling problem.

Lightning has failed
to take-off even
after a decade of
R&D

The only options
are centralised
exchange transfers
or centralised
pegged tokens

Centralisation has
huge counterparty
and censorship
risks

MARKET SIZE FOR PEGGED BITCOIN

The Demand for a decentralized Bitcoin on the side-chain is in the order of \$50 billion , our aim is to capture 10% of that.

DECENTRALISED PEGGED TOKEN

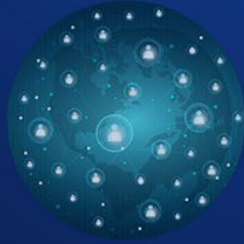

PLUG DEFI

BitDAO proposes a decentralised bitcoin pegged token that will track Bitcoin price closely

BitDAO (BDAO) token acts a governance and Defi Token with APY of 15-50%

Any Multi-chain token can act as collateral which acts ensures stable within the pegged token.

BITDAO MECHANISM & SOLUTION

The diagram consists of three white circular nodes arranged horizontally, connected by dark grey chevron arrows pointing from left to right. Each node is surrounded by a thick, curved arc in a different color: orange for the first node, cyan for the second, and purple for the third. The background is dark blue with light blue circuit-like lines and dots.

BITCOIN chain is clogged as we speak with 500k Transaction stuck in mempool and this number raising steadily

DeFi users love Ethereum, but the transactions costs are prohibitive

Multi-chain solves these problems. It is fast, cheap, and decentralized (800+ block producing validators)
